

Json from Langflow is exported and imported the same in postman

Postman interface showing a POST request to the endpoint `http://localhost:7860/api/v1/run/0b3faf82-df0a-4c65-8959-eee7ce9d37fd?stre`. The request body is a JSON object:

```
{  "output_type": "text",  "input_type": "text",  "input_value": "hello world!",  "tweaks": {    "APIRequest-RGoX0": {      "body": [        {          "key": "fields",          "value": "[\"key\", \"summary\", \"description\", \"status\", \"reporter\", \"customfield_10107\"]"        ]      }    }  }
```

The response is a 200 OK status with a JSON body:

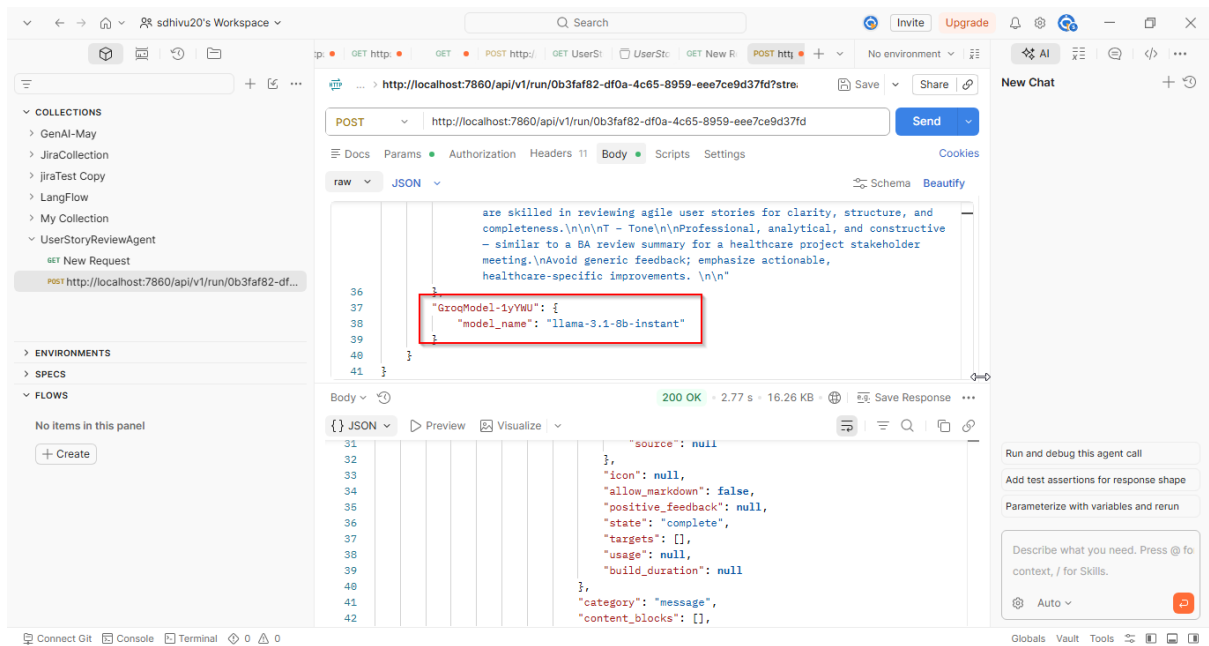

```
{  "session_id": "0b3faf82-df0a-4c65-8959-eee7ce9d37fd",  "outputs": [    {      "inputs": {        "input_value": "hello world!"      },      "outputs": {        "results": {          "text": {            "text": "text",            "text kev": "text".          }        }      }    ]  }
```

Postman interface showing a POST request to the endpoint `http://localhost:7860/api/v1/run/0b3faf82-df0a-4c65-8959-eee7ce9d37fd?stre`. The request body is a JSON object:

```
{  "value": "[\"key\", \"summary\", \"description\", \"status\", \"reporter\", \"customfield_10107\"]",  "key": "dgl",  "value": "key = \"JIR-26\"",  "key": "maxResults",  "value": "1"}
```

The response is a 200 OK status with a JSON body:

```
{  "session_id": "0b3faf82-df0a-4c65-8959-eee7ce9d37fd",  "outputs": [    {      "inputs": {        "input_value": "Review the fetched user story as per prompt"      },      "outputs": {        "results": {          "text": {            "text": "text",            "text kev": "text".          }        }      }    ]  }
```

User Story Review Summary

Parameter	Assessment	Score (/20)
Clarity	The user story lacks sufficient detail regarding employee profile functionality, making it difficult to understand the intended behavior.	12
Completeness	Key elements such as preconditions, acceptance criteria, and expected outcomes are missing or insufficiently defined.	10
Business Value Alignment	The story supports employee self-service objectives but does not clearly articulate the healthcare business benefits.	15
Testability	Limited requirements make it challenging to derive comprehensive test scenarios and validation points.	13
Technical Feasibility	The feature appears technically achievable, though implementation constraints and integration requirements are not specified.	16

★ Overall Score: 66 / 100

Areas for Improvement

1. Define Clear Acceptance Criteria

Include:

- Required employee profile fields
- Validation rules
- Error messages and handling
- Success criteria

2. Identify User Roles

Clearly specify:

- Employees
- Administrators
- HR personnel
- Other system actors and their responsibilities

3. Strengthen Business Value

Explain how the feature contributes to:

- Improved employee experience
- Reduced administrative effort
- Better compliance and data accuracy
- Operational efficiency

4. Improve Testability

Provide:

- Functional scenarios
- Positive and negative test cases
- Edge cases
- Expected results

5. Clarify Technical Requirements

Document:

- Integration dependencies
- Security and privacy considerations
- System constraints
- Data management requirements

Recommended Actions

- ✓ Use concise and unambiguous language.
- ✓ Include real-world examples or user scenarios.
- ✓ Collaborate with HR, IT, Compliance, and Business stakeholders to gather complete requirements.
- ✓ Follow a standard Agile User Story format:

As a [user role]

I want [feature/functionality]

So that [business value/benefit]

✅ Review and refine the story during backlog grooming sessions to ensure readiness for development and testing.

Conclusion

The user story demonstrates potential value but requires additional refinement to improve clarity, completeness, and testability. Addressing the identified gaps can significantly enhance its quality and increase its readiness for implementation and QA validation.
